Gain early access to new functionality

Misys is making it easier for early adopters to go live on new product releases. If you need new functionality, faster, this is the programme for you.

Collaborating on key test case scenarios with extra support from the Misys development team

The Misys Early Adopter Programme is designed to help you implement new software releases soon after general availability, while minimising the technical and business risks.

Software delivered through the Early Adopter Programme is quality assured according to Misys rigorous QA and testing processes in the normal way. Early adopters are able to participate by contributing and discussing customer test scenarios and use cases to minimise unexpected impacts.

To make early adoption of software a safe, viable business proposition, Misys also commits additional support from its software development team to help resolve any issues quickly, and to ensure faster deployment timescales.
How to participate in the Misys Early Adopter Programme

As new products and enhanced versions of existing products continue on their development path, certain releases are made available to the Early Adopter Programme for a small number of key clients.

These releases are usually for brand-new products or for new versions of existing products with significant technical or functional upgrades. If you are interested in using one of these releases, you can enter discussions about the possibility of joining the programme.
