

Misys **Connect**
Pilot & Deploy

Programme overview

Business & Technology Blueprints

Misys Business & Technology Blueprints improve project quality, cut implementation times, reduce risk, lower total cost of ownership and accelerate time to value.

The Misys Business & Technology Blueprints programme comprises 2 key components:

- › Best Practice Implementation Roadmaps
- › Packaged Services Offerings.

By choosing the most appropriate roadmap and packaged offering, as part of the Misys Business & Technology Blueprints programme, you will be able implement new technology and upgrades in the most efficient and effective way possible – benefiting from years of Misys deployment experience.

The 3 principle benefits of this programme are as follows:

Cost and Risk Reduction and Faster Time to Value

- Shorter project implementation times speed time to market. Greater clarity and control of projects leads to reduced scope creep and minimal core and enhancement changes.

Improved Operational Efficiency

- Using a standardised business language and common processes drives greater collaboration on projects and long-term operational cost savings. Improved project control supports more effective change and configuration management control.

Increased Project Success Rates

- Improved implementation and dependable outcomes, and clarity around exception management reduces project execution risk and provides faster return on investment.

Implement new technology and upgrades efficiently

Best Practice Implementation Roadmaps

The best practice implementation roadmaps deliver preconfigured application and process models that help you design, scope and implement Misys software to meet the specific needs of your business, and are supported by the in-depth experience and best-practice methodologies of the Misys team.

These roadmaps provide a standard-model implementation and a set of best-practice business processes that are aligned to Misys applications.

The methodology delivers consistent project execution, based on 3 key elements:

1. A flexible application model within a controlled framework, supported by a set of standard documents, accelerators and tools that allow ease of implementation and support business process flows.
2. An integrated approach from solution design through to delivery, using a set of implementation accelerators, including standard plans, migration tools and test scripts to facilitate the implementation project.
3. Enhanced quality, reduced process waste and lower exception management enhance project outcomes and improve return on investment.

Packaged services offerings

Depending on your project scope, Misys provides a number of packaged services offerings to best suit your business and technology needs. The Misys Professional Services team will deliver the business knowledge, technical expertise and project management skills required to ensure your business needs are met.

With deep product and industry experience, the Misys team will actively collaborate with your team to find the most appropriate and cost-effective route to success. These offerings give you the best of both worlds: close client proximity and interaction along with a highly efficient and quality-controlled “factory” for the configuration and build of your Misys system.
