Dealing with partial, delayed information does not make for **good decisions**

Financial institutions need better visualisation of information and data if they want to capitalise on opportunities.

Changing the game with better data visualisation and aggregation

Many firms' IT infrastructures fall short of delivering the holistic, real-time data required to act on new business opportunities, as well as to meet mounting reporting demands.

Pre-defined screens and antiquated systems that are not fit for purpose are making it difficult for traders and their managers to respond to today's challenges.

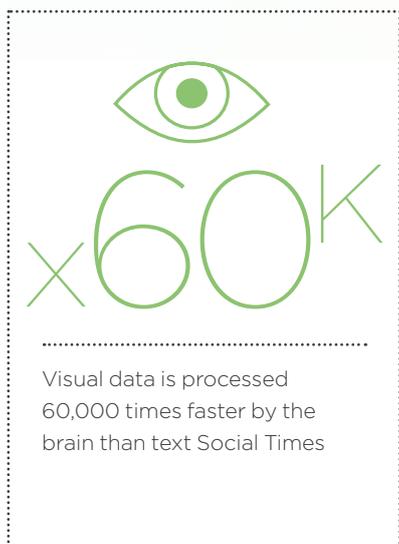

Legacy systems don't take the user experience into account, and, as a result, customer service suffers and inefficiencies hamper back-office performance.

Multiple systems and data across screens block direct access to information, making it cumbersome and difficult to make the right trade and increasing risk.

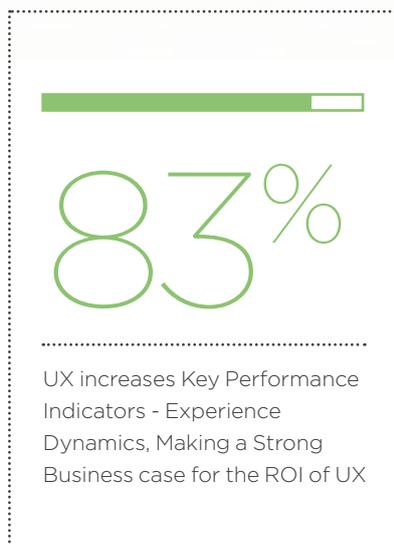

A holistic view

Effective management of risk review practices relies on a holistic understanding of risk exposures across business lines. However, due to insufficiently integrated data and technology solutions, many firms are unable to meet the narrow reporting demands.

Aged platforms

Many banks continue to use aged legacy IT platforms that were designed for specific needs. Now that those needs have changed, these are no longer fit for purpose, forcing traders and managers to use inadequate work-rounds which are time-consuming.

Data dissemination

Market conditions — such as rising cost/income pressure, the increasing need to provide multi-asset risk exposure, and changing front-to-back office compliance — mean data must be shared in ways traditional systems were never designed to support.

Aggregated data

A fresh approach to data aggregation is needed to provide an automated, combined and real-time view of risk exposures at the time of execution and through the trade life-cycle. This can only be achieved by ensuring that finance, risk and regulatory reporting all draw on a common, core data set.

A clearer viewpoint

Given today's heightened competition, traders need enhanced user experiences through better, clearer and more relevant dashboards if they are to deliver superior, more efficient customer service.

Misys **FusionCapital** for a new trading experience

Using a new HTML5 interface to boost user experience and deliver improved productivity and business intelligence to give the right information when it's needed.

State-of-the-art practitioner dashboards

FusionCapital delivers out-of-the-box, state-of-the-art practitioner screens that elevate your trading experience. Using the latest available technology, FusionCapital gives you the right digital tools you need to get a logical and rational view of information across systems.

Full customisation

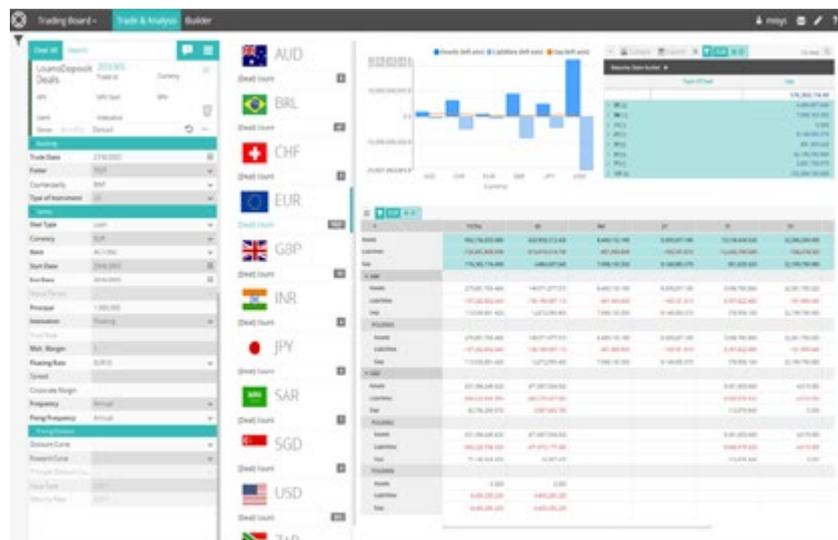

Traders now have the ability to access a workspace-based application that gives them the opportunity to customise the information displayed in line with their needs. By being able to take full ownership of their data in this way, they can make quicker, more informed decisions.

Intuitive navigation

By utilising the power and flexibility of HTML5, a richer user experience is delivered, giving clearer, intuitive navigation.

Now, traders experience enhanced communication between functions, such as trades, market data and position view. They are able to see and access the data and information they need, when they need it.

A clearer viewpoint

Misys **FusionCapital** for a new **trading** experience

Delivering clear **market insight** through customisable dashboards enables decisions to be made faster, reducing risk and lowering costs.

Mitigating risk

Rapid access to the right data is essential in today's fast-paced financial arena. Only with a clear picture of the trading landscape can traders perform to their optimum.

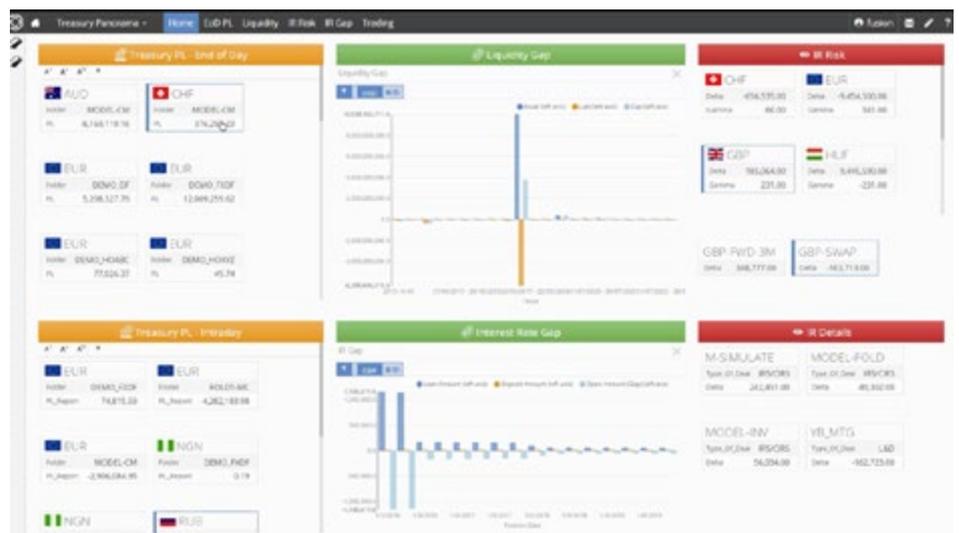

FusionCapital delivers a flexible, powerful and user-friendly reporting tool. Truly flexible, traders can quickly customise data extracts and schedule the creation and publication of PDF files.

Fully accessible — anywhere, any time

Traditionally, access to trading information has been confined to desktop computers.

However, by creating a platform that is accessible across a range of devices, including desktops, tablets and smartphones, traders are no longer confined to their desks, being able to access critical information wherever they are at any time.

A logical and rational view of information across systems
